Portfolio (Web Dev): <https://axaerys.github.io/PortfolioV3/>

## EDUCATION

### Masters of Computer Science

University of Herriot-Watt | Edinburgh, UK

2025 – To Date

### Online Courses

YouTube, Coursera, etc.

2023 – To Date

### Bachelor of Computer Science

Top Graduate Nov 2023

University of Wollongong | Wollongong, Australia

2020 – 2023

## WORK EXPERIENCE

### Iceberg Financial (Lead Front-End Programmer)

July 2023 - January 2024

- Developed and maintained responsive web applications (HTML, CSS, JS, Bootstrap, Git) for Iceberg Financial, ensuring seamless user experience across various devices.
- Implemented advanced UI components (incorporated different UI libraries while also creating components from scratch), enhancing the visual appeal and functionality of the User Experience.
- Created dynamic data visualization components, enabling users to interact with complex financial data intuitively.
- Conducted thorough testing and debugging to ensure robust and error-free user interfaces for Iceberg Financial's clients.

### Cyber Security Projects

#### Decentralized File Storage Application

Developed a fully decentralized end-to-end file storage application leveraging IPFS and blockchain technology. The frontend was built using HTML and CSS, while the backend was implemented with ReactJS, Solidity, and ElectronJS. The project utilized tools such as Ganache for local blockchain testing and was integrated with MetaMask for secure wallet interactions.

#### Designed a Functional Network Infrastructure for a University Campus

Conducted a comprehensive network needs analysis and developed a scalable network topology. The project included cost estimation, creation of a detailed IP addressing schema, implementation of the network using Cisco Packet Tracer, and configuration of routers to ensure efficient connectivity and performance.

#### Bloom filter using Bi-grams

Utilized Bloom filter efficiency to validate common passwords through bigram index comparison. Enhanced security by applying SHA-256 and MD5 hashing algorithms with randomized salt to securely store user passwords.

#### Privilege Escalation Cyber-Attack Simulation

Simulated a privilege escalation cyber-attack by leveraging passive exploitation techniques. The attack targeted system vulnerabilities, misconfigurations, or weak access controls on the victim's machine, ultimately achieving unauthorized root-level access from a lower-privilege user perspective.

## TECHNICAL KNOWLEDGE

- **Languages:** HTML, CSS, JavaScript, TypeScript, Java, C, C++, C#, NodeJS, Python, Bash, Machine Code
- **Frameworks:** Unix CLI, ReactJS, NextJS, React Native
- **Query Languages:** MongoDB, MySQL, SQLite, Oracle PL/SQL
- **Skills:** Kali Linux Pen-Testing, Packet Tracer, Project Management Body of Knowledge (PMBOK)

## PROFESSIONAL SKILLS

- Lo-Fi & Hi-Fi Prototyping + Storyboarding
- Adobe Photoshop
- Adaptability, Creativity, Debugging, Solutionist
- Financial Knowledge
- Languages: Persian (Native), English

## AWARDS & SCHOLARSHIPS

- Academic Merit Scholarship, UOWD (25%) 2020,2021,2022,2023
- Written Information Security Program (WISP) Certificate 2022
